

# KROMAFLEX

Flexo Technologies has launched an ink system which addresses the unique needs applicable within the label and narrow web markets. The benefit of our new polymer inks lies in the ability to achieve a lustrous fine print while delivering a superior ink that can withstand the demands of an extremely fast web press. Flexo Technologies has designed the Kromaflex ink system specifically for the Label and Narrow Web industry. Printers depend on its performance for complex print jobs of high line screens, high speeds, and vivid process artworkwork. Kromaflex requires little to no maintenance through the use of additives for consistent productivity, while delivering the end properties most important to your job.

## Suitable for a wide variety of applications:

> Self adhesive labels

(coated & uncoated papers, TC filmic substrates, PE PVC and top coated PE & PP)

> Tags

(carton boards)

*This ink can be hot foil blocked and thermal transfer overprinted.*

## PROPERTIES

- Enhanced color consistency and excellent mileage
- Very good press stability
- Great dot sharpness, minimal dot gain and high quality results on four color process, vignettes as well as fine line and text work
- High printing speed
- Very low VOC content and user friendly raw materials

## BENEFITS

- Improved print results
- Consistent high print quality
- Improved profitability due to reduced waste and press down time
- Best print quality obtainable with water-based flexo
- Improved productivity
- Environmentally friendly
- Possible to get into new applications, food labels and food packaging
